

Claims

1. A method of controlling the response of a wireless communication device comprising the following steps:

scheduling a time period in an application on a first device during which the response of a second wireless communication device is to be modified;

5 networking the first device with the second wireless communication device; and,

transmitting a signal from the first device to the second device modifying the response of the second wireless communication device for the time period scheduled in the application on the first device.

2. The method of claim 1 wherein the first device is a personal digital assistant.

3. The method of claim 1 wherein the second wireless communication device is a cellular telephone.

4. The method of claim 1 wherein the first device is networked with the second wireless device using Bluetooth.

5. The method of claim 1 wherein the application on the first device is a calender function in Palm OS and the first device is a Palm OS compatible device.

1990	1991	1992	1993	1994	1995	1996	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042	2043	2044	2045	2046	2047	2048	2049	2050	2051	2052	2053	2054	2055	2056	2057	2058	2059	2060	2061	2062	2063	2064	2065	2066	2067	2068	2069	2070	2071	2072	2073	2074	2075	2076	2077	2078	2079	2080	2081	2082	2083	2084	2085	2086	2087	2088	2089	2090	2091	2092	2093	2094	2095	2096	2097	2098	2099	2100	

Figure 1

8. A wireless communication device comprising:
a processor,
a wireless communications interface, and
storage for executable code,
5 the processor executing the executable code to allow a user to schedule
a time period during which the response of the wireless communication device to
wireless communications is to be modified, and modifying the response of the
wireless communication device to wireless communications during a time period
scheduled by the user.

9. The wireless device of claim 8 wherein the wireless communication
device is a personal digital assistant.

10. The wireless device of claim 8 wherein the wireless
communication device is a cellular telephone.

11. The wireless device of claim 8 wherein the executable code
includes Bluetooth software.

12. The wireless device of claim 8 wherein the wireless
communication device is a Palm OS compatible device and the executable code
includes the calendar function in Palm OS.

13. The wireless device of claim 8 wherein the selection to modify the response of the wireless communication device prevents the wireless device from sounding an audible alert.

14. A program product for a wireless communication device, the program product comprising:

executable code to allow a user to schedule a time period wherein the response of the wireless device to wireless communications is modified.

15. The program product of claim 14 wherein the executable code further includes networking code for networking with a second device.

16. The program product of claim 15 wherein the networking code comprises Bluetooth compatible networking code.

17. The program product of claim 15 wherein the executable code is further configured to allow a user of the second device to schedule a time period in which the response of the wireless communication device to wireless communications is modified.

18. The program product of claim 14 wherein the modification of the response of the wireless communication device to wireless communications comprises preventing the wireless communication device from sounding an audible alert.
